

RMCARD400 v1.0.6 Release Notes

REMOTE MANAGEMENT CARD FIRMWARE RELEASE NOTES

Applicable Products: RMCARD400

Version 1.0.6 (Release Date: April 17, 2025)

New Features

- Adds support for SSH Key-Based Authentication
- Adds support for pagination functionality for event logs and status records

Feature Improvements

- Support was improved with a SNMP OID for the environmental sensor
- Command Line Interface (CLI) support was added for the environmental sensor
- Adds an event to record the results of firmware updates (Success or Fail)
- Update done to force users to change their password after logging in with the default password in the console interface
- Updated the copyright information
- SMS Clickatell Service Function was updated to the latest API method for Clickatell Server
- Support added for IPv6 on NTP and Syslog server settings
- The "Date and Time" setting interface was updated to a calendar-style format and the date range setting was extended from 2015 to 2099

Fixes

- Resolves a failure when using both DHCP and IP simultaneously with the serial port in the Command Line Interface (CLI)
- Fixes an issue with the Save and Restore function with the configuration of Manager IP
- Corrects an error where the PowerPanel Business (PPB) type is displayed incorrectly on the [UPS->PowerPanel List] webpage when connected to PowerPanel Business (PPB) Management
- Resolves an issue with the UPS battery voltage value on the [UPS->Information] webpage being displayed incorrectly
- Fixes an issue with the UPS not forcing a reboot when "Enter Sleep Mode when All Remote Shutdown" is enabled in the [UPS->Configuration] menu and power is restored before a PowerPanel Business (PPB) Remote shutdown
